

02/02/09 - Wopti Utilities Special Edition 7.85.8.926
--

	Wopti Utilities Special Edition 7.85.8.926 Wopti Utilities is a multi-award winner and trusted by over 50 million users worldwide. It is an all-in-one system utility software to optimize, clean up, maintain and speed up your PC. Besides, it also offers complete descriptions of hardware devices and the software installed for you to fully understand your PC. The suite includes 30+ utilities grouped in four general modules (System Information, System Optimization, System Cleaning and System Maintenance), all designed to boost your PC's performance. Module 1: System Information System Information menu brings forward functions for checking out the entire computer components, both hardware and software, providing accurate details about the CPU, operating system version, user, BIOS version, motherboard, graphic card, RAM, network, etc, monitoring the heat level of the CPU . You can also perform a benchmark test in order to evaluate your computer's performance. Module 2: System Optimization System Optimization module allows making changes to the way the system behaves in order to perform at its best, according to its resources and operating system. The areas include disk cache optimization, making a snappier desktop menu, file system optimization, network optimization, boot speed improvement, security strengthening, making better personal settings, customizing the way system services serve you or, if you are an advanced user experienced in handling registry entries, you can customize the system by setting the registry by yourself. Module 3: System Cleaning This module covers everything you need for maintaining a squeaky computer with as little as no junk files to mess up its performance. The module is composed of: Registry Cleaner--Cleans registry rapidly and safely; Junk File Cleaner?Cleans redundant files in hard disk or specific directory; Redundant DLL Cleaner?Analyzes redundant DLL in hard disk and remove after backup;

ActiveX Cleaner? Analyzes redundant ActiveX/COM components and remove after backup; Software Uninstaller? Automatically analyzes the related files in hard disk and information in registry of the selected files and remove after backup; Trace Cleaner? Cleans network history, Windows traces as well as history of files used in certain applications; Install Patch Cleaner? Deletes remnant files released at the beginning of the install process.

Module 4: System Maintenance

Wopti Utilities suite provides the necessary instruments for maintaining the computer at its best performance. The module is composed of:

- Disk Doctor? Detects and fix disk errors;
- Disk Defrag? Analyzes and defrag disk fragments and releases memory easily;
- Driver Backup? Backup drivers intelligently for future system re-installation;
- Log Viewer? Consults a log with all the actions initiated by the suite. Access to the configuration of all the elements in the suite can be protected by a user-defined password.
